

Efficient 2D and 3D Facade Segmentation using Auto-Context

R. Gadde, V. Jampani, R. Marlet, and P. V. Gehler (WACV 2015)

- ▶ Problem: Segmentation for 2D images and 3D point clouds of building facades
- ▶ Existing methods make use of domain-specific knowledge as strong prior information
- ▶ Contributions:
 - ▶ Introduces generic segmentation method that ignores domain knowledge
 - ▶ Shows good segmentation results by pixel classifications methods that use basic image features in conjunction with auto-context features
 - ▶ Proposes system of a sequence of boosted decision tree classifiers stacked using auto-context features
