

Classification with an Edge:

Improving Semantic Image Segmentation with Boundary Detection

D. Marmanis, K. Schindler, J. D. Wegner, S. Galliani, M. Datcu, and U. Stilla (ARXIV 2016)

- ▶ Semantic segmentation of high-resolution aerial images using boundaries
- ▶ DCNNs: Contextual information over very large windows
- ▶ Problem: Loss of spatial resolution, blurry object boundaries
- ▶ Adding boundary detection to SEGNET encoder-decoder architecture, FCN-type models
 - ▶ Boundary likelihoods as an additional channel
- ▶ Ensemble prediction with SEGNET, VGG and FCN
- ▶ Boundary detection improves semantic segmentation with CNNs.
- ▶ > 90% overall accuracy on the ISPRS Vaihingen benchmark
