

The PASCAL Visual Object Classes (VOC) Challenge

M. Everingham, L. V. Gool, C. K. I. Williams, J. Winn, and A. Zisserman (IJCV 2010)

(a) Segmentation taster

(b) Person layout taster

- ▶ A benchmark with a standard dataset of images and annotation, and standard evaluation procedures
 - ▶ Two principal challenges: classification and detection
 - ▶ Two subsidiary challenges: pixel-level segmentation and person layout estimation
- ▶ Dataset: challenging images and high quality annotation, with a standard evaluation methodology
 - ▶ Variability in object size, orientation, pose, illumination, position and occlusion
 - ▶ No systematic bias for centred objects or good illumination
 - ▶ Consistent, accurate, and exhaustive annotations for class, bounding box, viewpoint, truncation, and difficult
- ▶ Competition: measure the state of the art each year
